

Regulatory Compliance Portal and Information Security Assessment

Online Assessment Services

Redhawk provides information security assessment for regulatory compliance through online collaboration.

Today's Complex Compliance Environment

In today's regulated business environment, organizations have to deal with many regulations and industry standards. Redhawk provides services based on best practices to facilitate compliance with FFIEC, Sarbanes - Oxley, GLBA, HIPAA and PCI guidance. The information security standard, ISO 27002, is used to facilitate compliance along with specific industry guidance.

Streamline Compliance with Online Security Assessments

Redhawk streamlines the compliance process by consolidating the information needed for various regulations and reducing the level of effort required to manage compliance projects:

- Manages multiple compliance and regulatory controls
- Decreases the amount of resources needed to complete separate compliance projects

Testing Methodology

Redhawk's personnel have the experience and training needed for vulnerability testing and security architecture analysis. A risk-based methodology is used to determine the appropriate countermeasures for information systems, which are then audited and recommendations are produced to mitigate risks.

About Redhawk

Redhawk designs security defense in depth utilizing best practice security standards, professional services & best of breed products.

Services:

- Independent Audit
- Managed Vulnerability Assessment
- Managed Security Services
- Internal Security
- Email Security
- Business Continuity Planning

Redhawk Certifications

- CISSP - Certified Information Systems Security Professional
- ISSAP - Certified Information Systems Security Architecture Professional
- MBCI - Member of the Business Continuity Institute
- CCNA - Cisco Certified Network Associate
- MCP - Microsoft Certified Professional

Compliance Portal

The Portal helps facilitate the assessment process by providing reports and collaboration between Clients and Redhawk. Redhawk will assess risks and include recommendations for remediation. The Portal includes areas for Clients to input responses incorporating an integrated security report. The report can be provided to internal audit and regulatory examiners and includes a management summary for senior management.

Ticket System - Tickets provide documentation for assessment activities and provide a mechanism for collaboration on projects.

File Management - Documentation and files can be securely posted online for collaboration with Redhawk consultants. This is also an area for archiving Policy, Procedure, Projects and Reports to support audit and compliance projects.

Project Management - Redhawk project management of project teams prevents redundant work on separate compliance / regulatory controls. It also decreases the amount of resources needed to complete multiple, separate compliance projects.

Security Assessment Reports - Both executive summary and detailed reports are provided as part of security assessments for regulatory compliance needs.

Redhawk's engineers are backed by the Certified Information System Security Professional (CISSP) program.

Testing is provided through online security assessment modules:

- Administrative
- Physical Control Objectives
- External Technical Controls
- Internal Technical Controls
- Wireless
- Telephony
- Social Engineering
